# SKINOVAGE<sup>PX</sup>

The intelligent premium skincare system  
– tailored exactly to your individual needs.

A skincare system designed to enhance your natural beauty. SKINOVAGE<sup>PX</sup> is a multi-functional system that is in harmony with the individual nature of your skin. For its premium skincare range, BABOR's Research and Innovation Center has coordinated selected, active plant-based ingredients and tailored them precisely to the needs of different skin types and specific skin conditions.

Our modern-day environment places special demands on our skin. It needs effective protection against environmentally induced skin aging caused by UVA rays and free radicals, and the natural mechanisms in individual skin types also need support.

In addition to special active ingredients for specific skin types, all SKINOVAGE<sup>PX</sup> products contain precious Alpine stem cells, which protect the skin against premature aging, as well as the molecular catalyst OsmoTec, which improves the skin's ability to process active ingredients.

To make it easier to select the most suitable product, a point system is used to classify the consistency of the creams. It ranges from one point ● for very light lotions through to five points ●●●●● for highly enriched creams. This also helps to identify the ideal day and night cream duo or the right cream to suit the time of year.

SKINOVAGE<sup>PX</sup> is developed in line with BABOR's quality standards: with a skin-identical pH value, proven effectiveness and compatibility, and free of parabens – for a visibly improved complexion.
